

1. Interpret the physical meaning of shear stress in the view of velocity and momentum transport. **(10 points)**
2. Explain separately the temperature dependence of the viscosities of a gas and a liquid. **(20 points)**
3. A liquid of constant density and viscosity is in a cylindrical container of radius  $R$  as shown in Figure 1. The container is caused to rotate about its own axis at an angular velocity  $\Omega$ . The cylinder axis is vertical.
